

Attentional Cat-pital: Jorts The Cat's Disruption of Triad Closure Processes in Social Networks

The Lazer Lab

Alyssa Smith, David Lazer

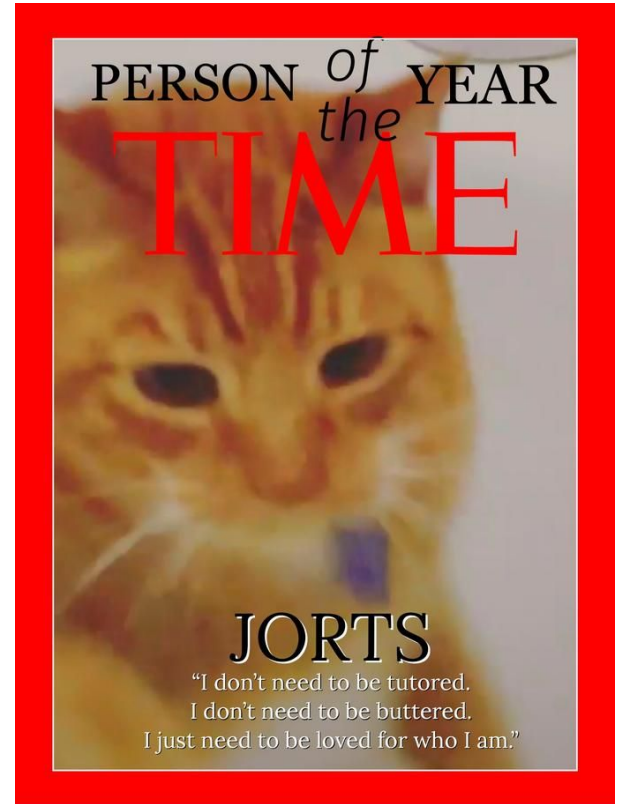

Outline

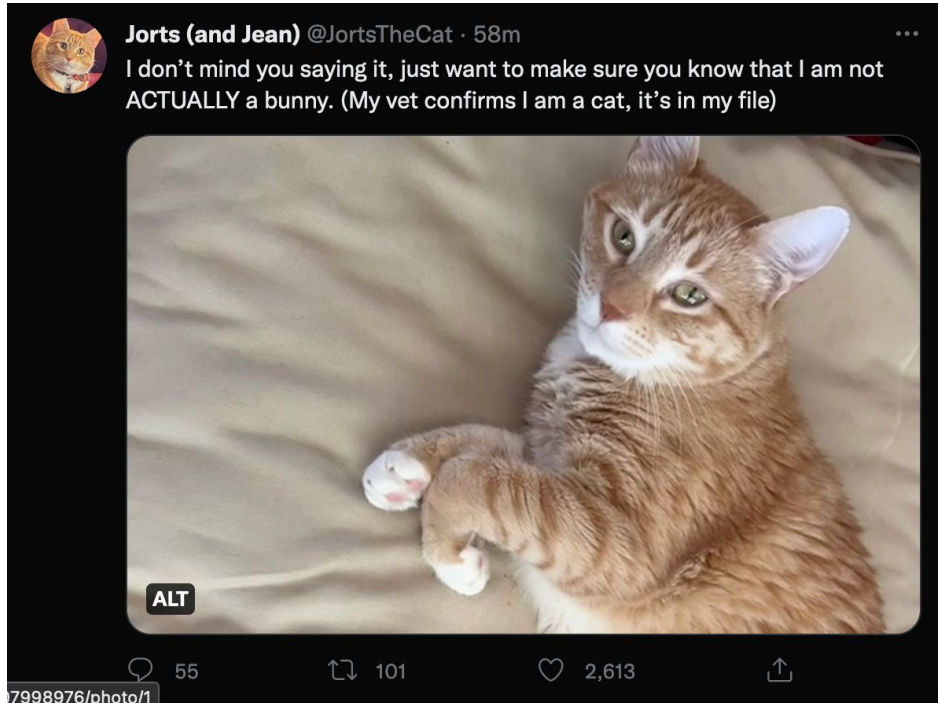

- Intro: Who is Jorts? What is Triad Closure?
- Jorts the Cat: a case study in disruption
- Data collection methods and evidence of disruption
- Meaning of evidence
- Conclusion and future work

Background on Jorts

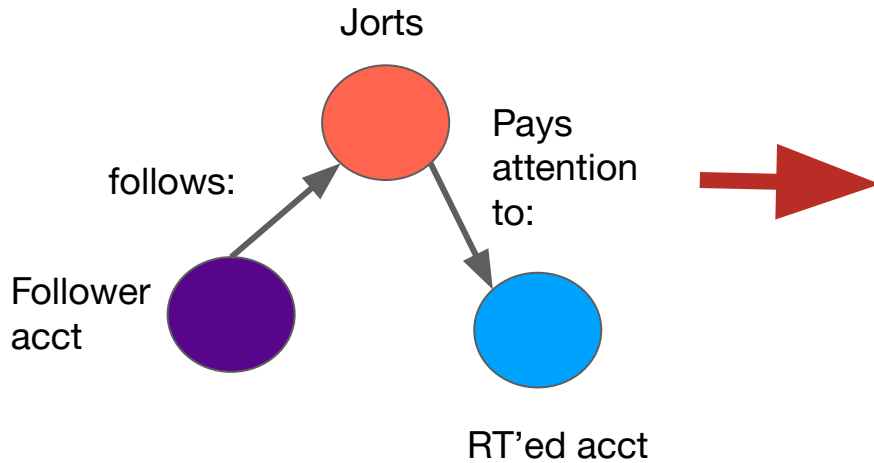

- Dec. 2021: Jorts the cat goes viral (reddit → Twitter)
- @JortsTheCat on Twitter currently has 185k followers

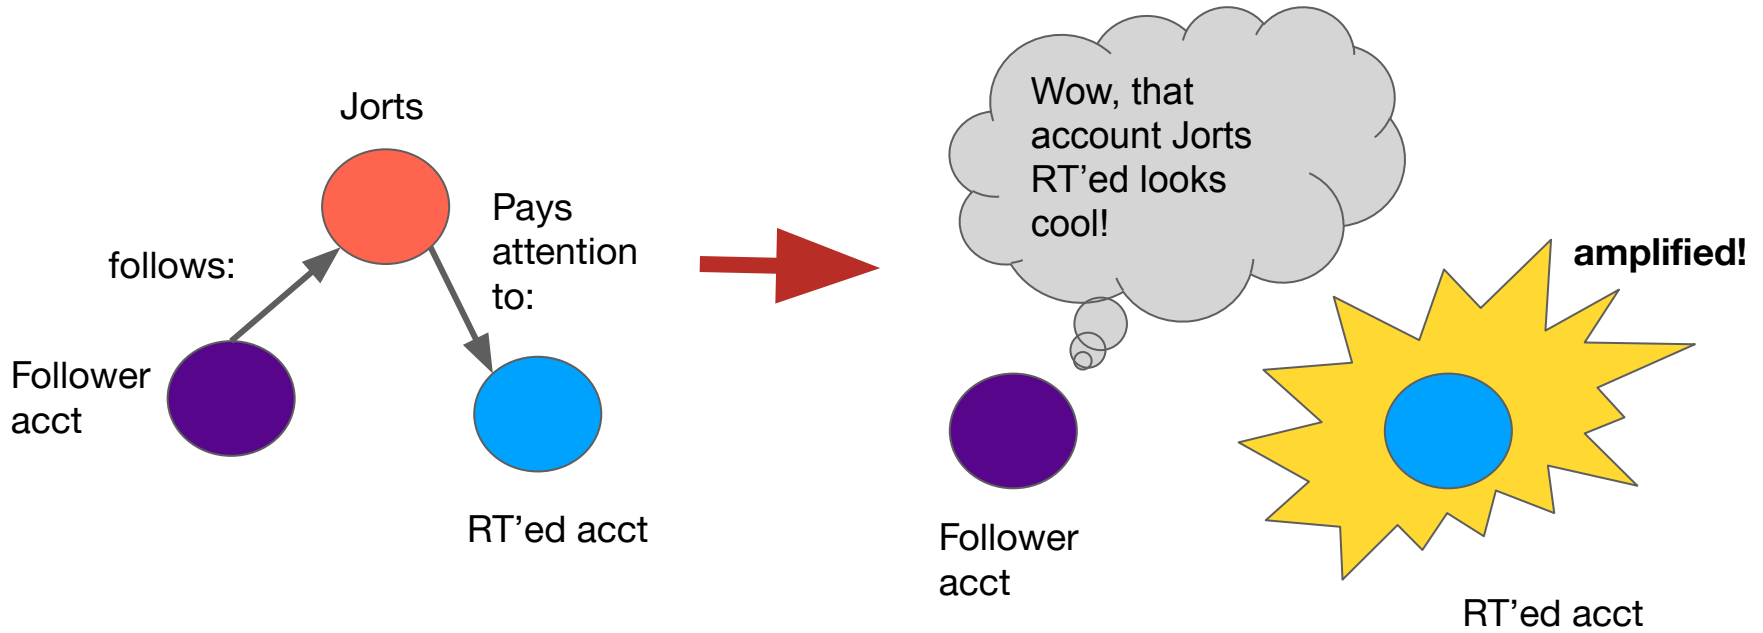

Background on Jorts

Triad Closure & Homophily in the Literature

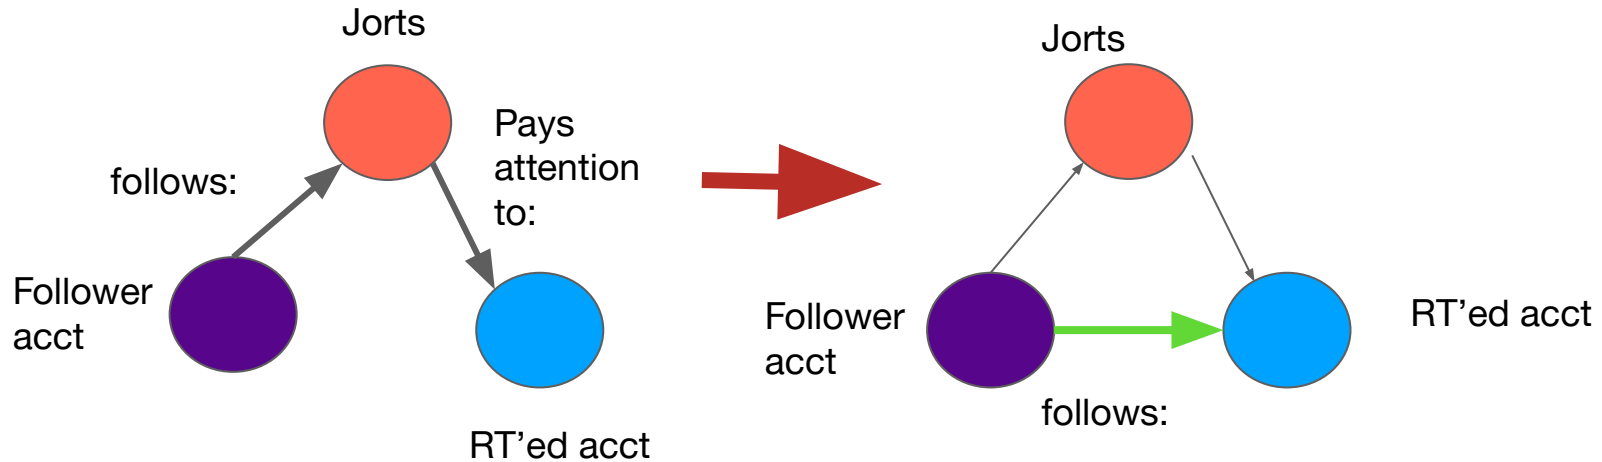

Triad Closure & Homophily in the Literature

Triad Closure & Homophily in the Literature

- Transitivity: if A follows B and B follows C, then the graph is transitive if A also follows C (Holland & Leinhardt, 1971) [1]

[1]: Holland, P. W., & Leinhardt, S. (1971). *Transitivity in Structural Models of Small Groups*. *Comparative Group Studies*, 2(2), 107–124. doi:10.1177/10464964710020020

Triad Closure & Homophily in the Literature

- Triad closure in the literature is an undirected generalization of transitivity.
- Open triads + social foci → opportunities for homophily (Feld, 1981), (Kossinets & Watts, 2009) ([1] [2])
- **What endogenous & exogenous processes shape network formation?**

[1]: Feld, S. L. (1981). The Focused Organization of Social Ties. *American Journal of Sociology*, 86(5), 1015–1035.
<http://www.jstor.org/stable/2778746>

[2]: Kossinets, G., & Watts, D. J. (2009). Origins of Homophily in an Evolving Social Network. *American Journal of Sociology*, 115(2), 405–450. <https://doi.org/10.1086/599247>

What Are We Doing?

- 2 main opportunities for triad closure on Twitter:
 - **Algorithmic Foci** (semi-exogenous)
 - **Amplification by Accounts** (endogenous)
- Both give *opportunities* and individuals make *choices*
- ***What can we learn about Twitter through Jorts' effects on network formation?***

What Are We Doing?

- Jorts' network roles
 - **Bridge between communities** (encouraging inter-community triad closure)
 - **Social capital broker** (leveraging latent attention)
 - **Algorithmic focus** (synergistic w/ Jorts' own influence)

Proving Jorts' Network Roles

- ***Bridge between communities***
 - Who is Jorts amplifying?
- ***Social Capital Broker***
 - RT → more triad closure?
 - Can we predict triad closure?
- ***Algorithmic Focus***
 - Amplification influences following choices?

Dynamic Network Data

- Time-bounded following events → sequences of triad closure

Which edge
existed first?

- Dynamic networks are hard to come by, but....

Dynamic Network Data

- Time-bounded following events → sequences of triad closure
- Dynamic networks are hard to come by, but....

We made one!!!

Time-Bounded Following Dataset

Twitter API V1 + cursor time bounds → time-bounded sets of follow events

Who is following @JortsTheCat?

List of accounts that have followed @JortsTheCat.....and a nanosecond Unix timestamp (**the cursor**)

Time-bounded follower collection code snippet

Time-Bounded Following Dataset

Twitter API V1 + cursor time bounds → time-bounded sets of follow events

Who is following
@JortsTheCat?
**Cursor = [long
unix timestamp]**

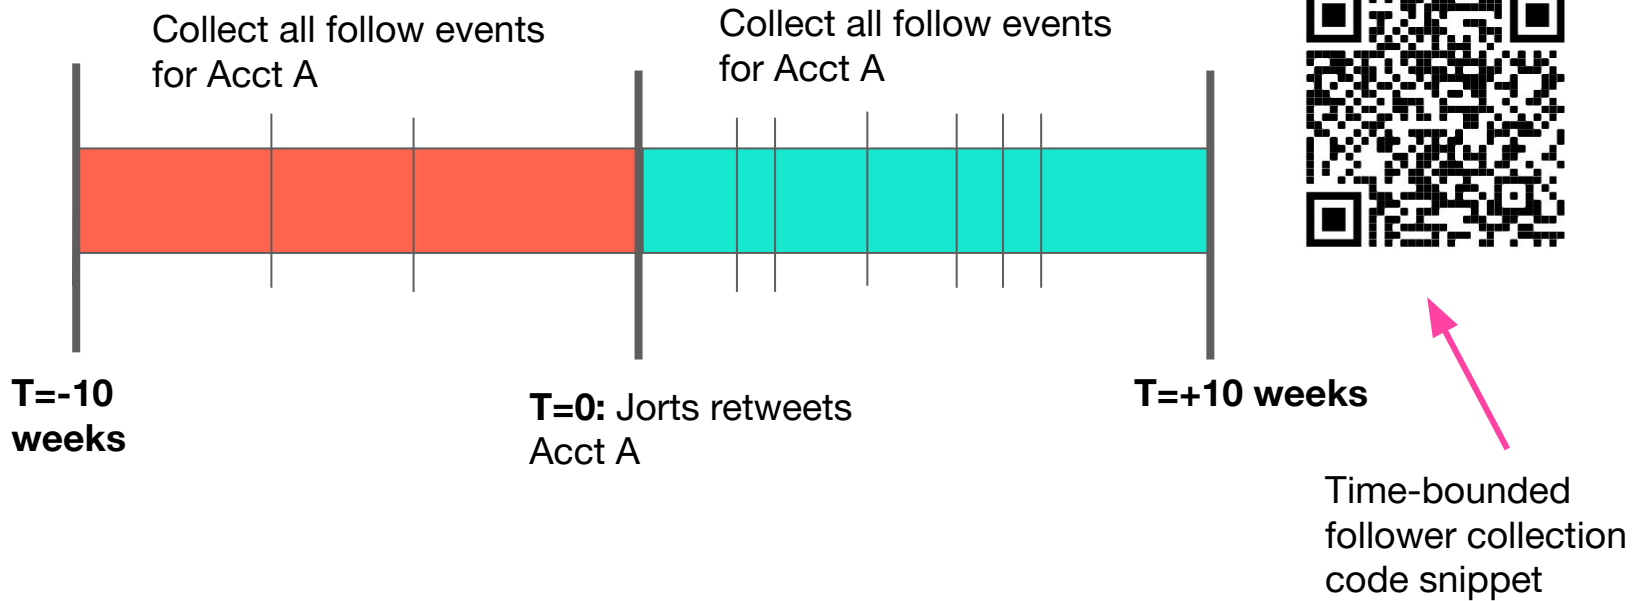

List of accounts that
have followed
@JortsTheCat.....and
they all occurred
after the given
timestamp.

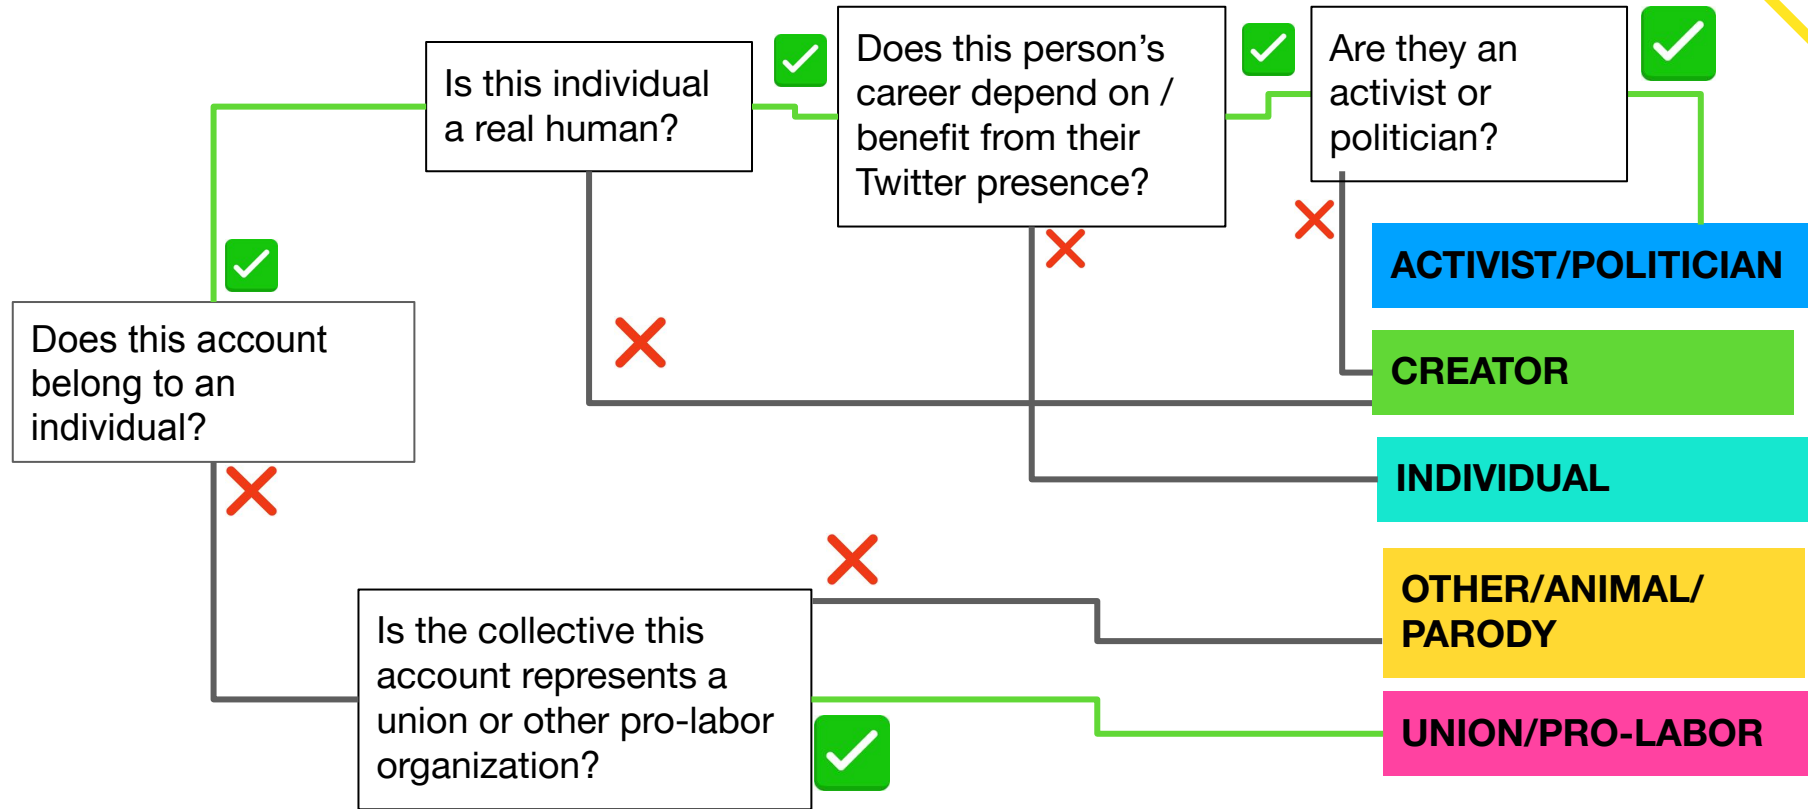

Time-bounded
follower collection
code snippet

Time-Bounded Following Dataset

Twitter API V1 + cursor time bounds → time-bounded sets of follow events

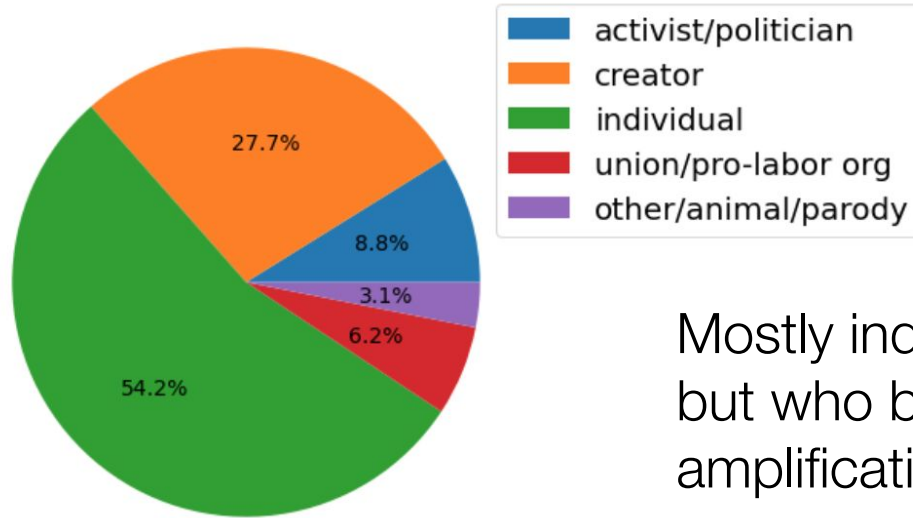

Flowchart for Categorizing Accounts

Who is Jorts Amplifying?

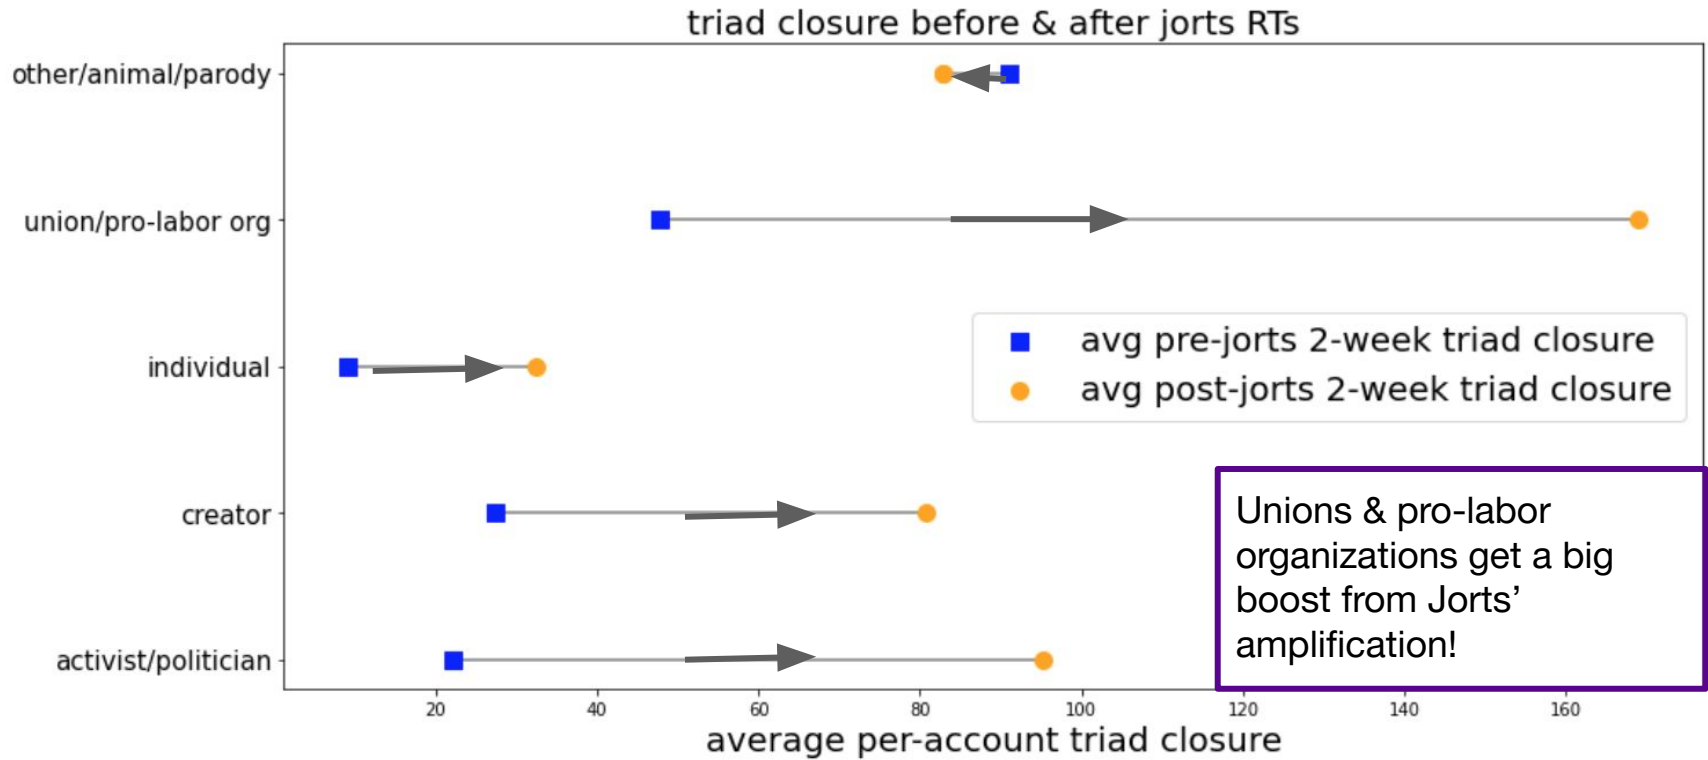

Distribution of Retweeted Account Types

5% of Jorts' tweets are retweets; 6% are quote tweets

Mostly individuals and creators – but who benefits the most from amplification?

Who Sees More Triad Closure Post-Amplification?

Who Has Lots of Followers In Common With Jorts?

Fractional Follower Overlap with Jorts by Account Category

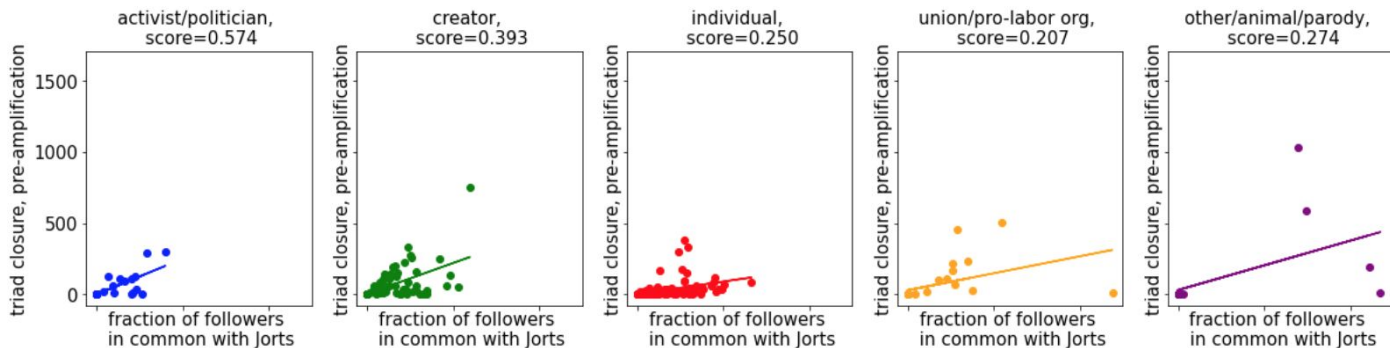

High overlap expected for union/pro-labor orgs; overlap partially drives triad closure.

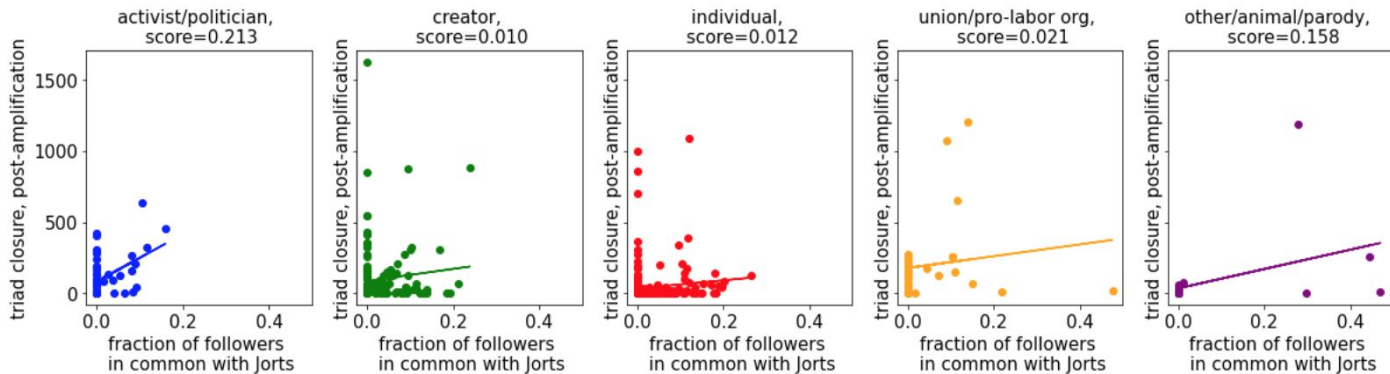

Follower Overlap and Triad Closure

Regressions Relating Fractional Follower Overlap to Pre- and Post- Amplification Triad Closure

Pre-amplification
correlation
(better!)

Post-amplification
correlation (worse
:())

What Can Follower Overlap Tell Us?

Pre-amplification
correlation
(better!)

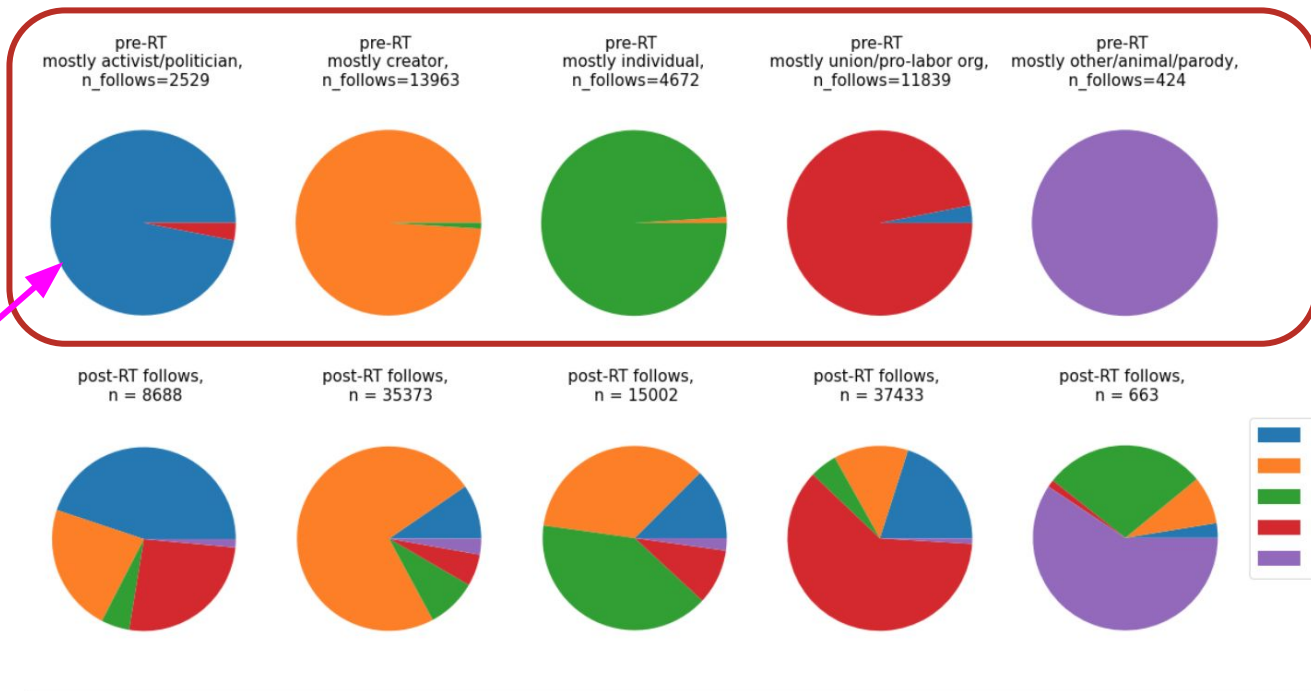

Post-amplification
correlation (worse
:())

Regressions Relating Fraction of Follower Overlap to Pre and Post-Amplification Triad Closure

How is Amplification Disruptive?

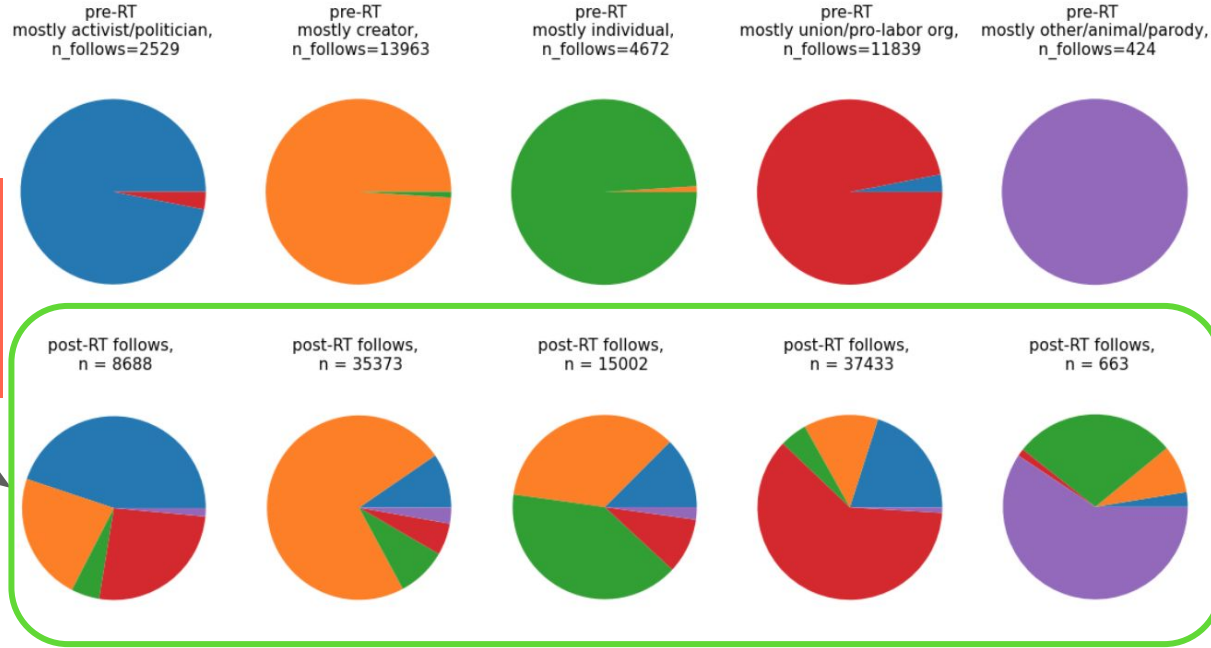

Post-Retweet Following Choices of Users With Homogenous Pre-Retweet Follows

Find people who make homogenous following choices...

How is Amplification Disruptive?

Post-Retweet Following Choices of Users With Homogenous Pre-Retweet Follows

...but what happens post-amplification?

How is Amplification Disruptive?

Post-Retweet Following Choices of Users With Homogenous Pre-Retweet Follows

Pre-amplification:
homogenous triad
closure choices

Post-amplification:
more diverse triad
closure choices

pre-RT
mostly activist/politician,
n_follows=2529

post-RT follows,
n = 8688

pre-RT
mostly creator,
n_follows=13963

post-RT follows,
n = 35373

pre-RT
mostly individual,
n_follows=4672

post-RT follows,
n = 15002

pre-RT
mostly union/pro-labor org,
n_follows=11839

post-RT follows,
n = 37433

pre-RT
mostly other/animal/parody,
n_follows=424

post-RT follows,
n = 663

Results of Jorts' Amplification

- ***Bridge between communities:***
 - Jorts amplifies different types of users
- ***Social Capital Broker:***
 - RTs → more triad closure
 - harder to predict triad closure rate once Jorts amplifies
- ***Social Focus:***
 - Post-amplification following choices in homogenous followers become more diverse

Conclusion: The Flow of Social Capital

- Latent attention → reallocate social capital
- Disruption of triad closure processes = localized disruption of attention economy
 - Disrupts choice homophily processes
 - Presents novel triad closure opportunities

Future Work

- Bridging ties don't usually remain bridges [1] → If Jorts is a bridge, what will happen long-term?
- Quote Tweets, stance, and “ratioing” behavior
- Determining causality
- Comparison to other types of accounts
